Editable DOCX + PDF progress report

Aviator Game System

Project Progress Report

This report explains the current project screenshots in page order and summarizes the implemented features across gameplay, wallet, profile, rewards, compliance, chat, rooms, and admin reporting.

Date: 10 July 2026

Executive Summary

Current State

The project is a working Django Aviator platform with the core player journey implemented: account access, game play, wallet, cash-out, history, chat, and user guidance.

Evidence Used

The submitted screenshots were ordered by the visible page flow and cross-checked against project routes, views, forms, and models.

Major Strength

The system now includes both player-facing screens and backend records for transactions, game rounds, KYC, self-exclusion, rewards, rooms, and audit logs.

Next Step

Focus on final QA, production payment integration, deployment hardening, and complete admin/operator testing.

Implemented Feature Coverage

This table captures the progress implemented so far in the project.

Feature Area	Status	Progress Explanation
Authentication	**Implemented**	Register, login, logout, account profile, and automatic redirects into gameplay.
Aviator game loop	**Implemented**	Two bet panels, animated multiplier, crash/cash-out settlement, recent multipliers, and live table.
Provably fair rounds	**Implemented**	Server seed hash, client seed, crash point, reveal flow, and audit logging for round verification.
Wallet	**Implemented**	UGX balance, deposits, withdrawals, payment requests, transaction records, and balance updates.
Payments	**Implemented**	MTN Mobile Money, Airtel Money, card, bank transfer, and Pesapal provider options in form logic.
Transactions	**Implemented**	Bet debit, win credit, deposit, withdrawal, refund, and bonus transaction types with status tracking.
Profile and statistics	**Implemented**	Player ID, VIP level display, XP progress, win rate, games played, winnings, and activity panels.
Compliance	**Implemented**	Phone verification, KYC submission, deposit/loss limits, risk alerts, and self-exclusion controls.
Free bets and rewards	**Implemented**	Free-bet management UI, reward events, reward wallet, claims, reward transactions, and chat rain.
Chat	**Implemented**	Live chat UI, emoji picker, reactions, flagged-message checks, and online player display.
Multiplayer rooms	**Implemented**	Room creation, room joining, room status, host start flow, participants, and room cash-out logic.
Admin analytics	**Implemented**	Staff analytics route, financial report generation, payment review data, KYC/risk counts, and admin model controls.
Audit logging	**Implemented**	System activity logging for registration, deposits, withdrawals, game starts, cash-outs, rooms, rewards, and admin actions.

Feature Area	Status	Progress Explanation
Responsive UI	**Implemented**	Dark themed dashboard layout with side navigation, modals, mobile chat panels, and compact game controls.

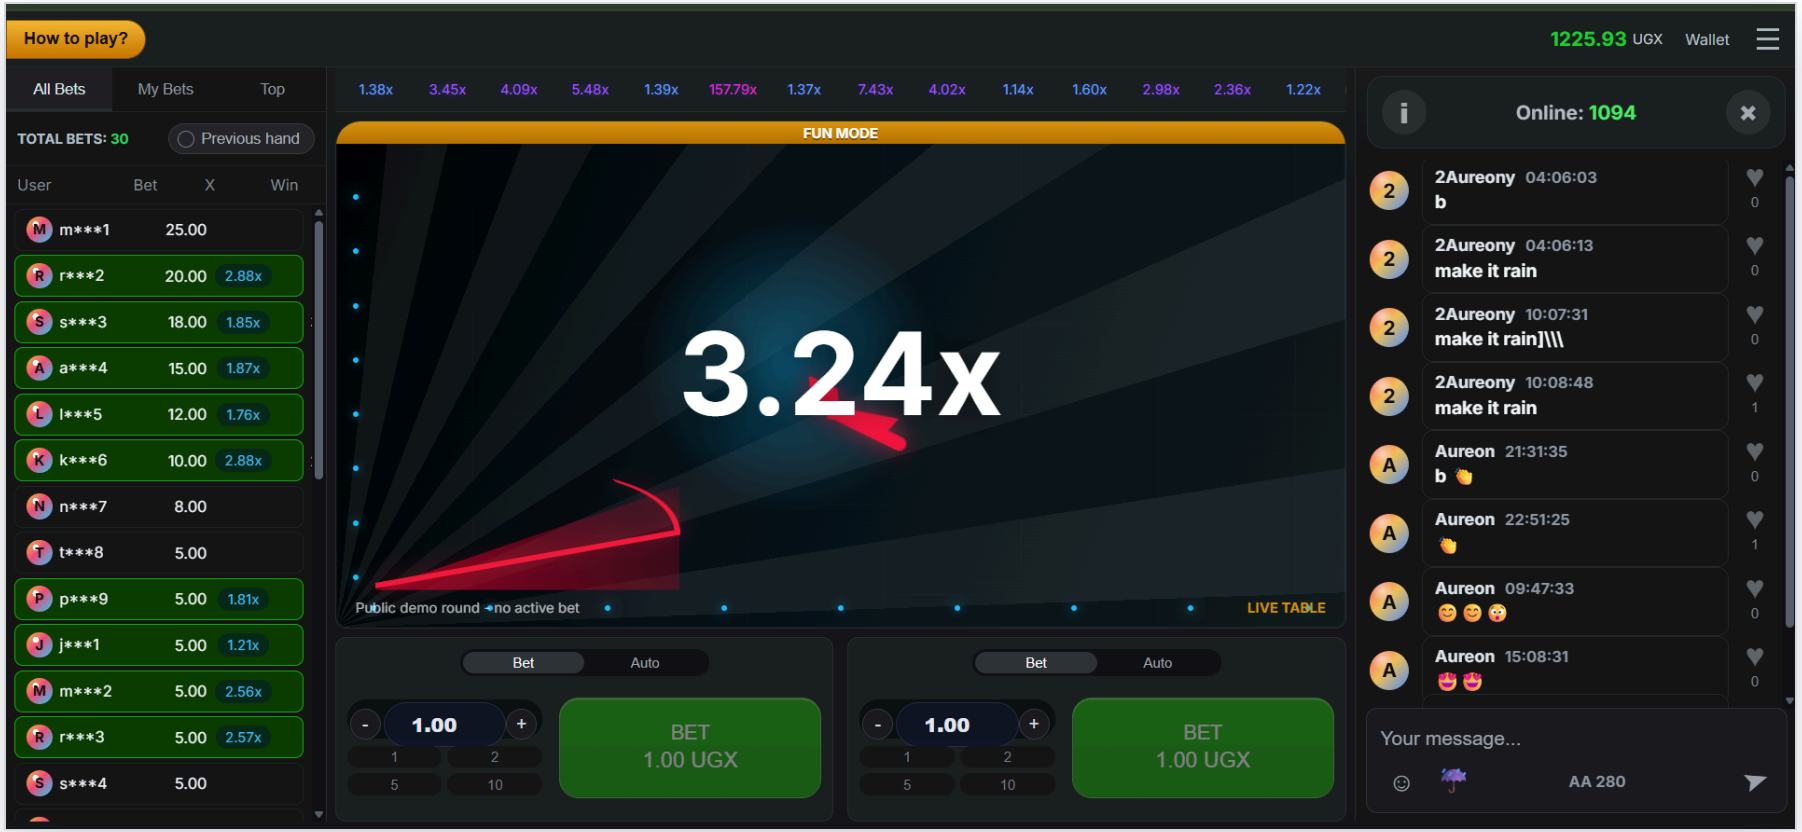

System Flow Covered By Screenshots

- Game landing/play screen: live multiplier, dual betting, cash-out, history, and chat.
- Account navigation: settings, free bets, bet history, game limits, rules, and provably fair access.
- Wallet and transactions: balance, deposits, withdrawals, providers, payment requests, and ledger view.
- Profile and compliance: player metrics, VIP progress, KYC, limits, and self-exclusion.
- Social and reward features: chat, emoji picker, reactions, online count, and chat rain distribution.
- Support pages: how-to-play guidance and game rules access.

Screenshot 01

Live Aviator Play Screen

Main play interface showing the multiplier flight, live betting table, wallet balance, dual bet controls, recent multipliers, and live chat.

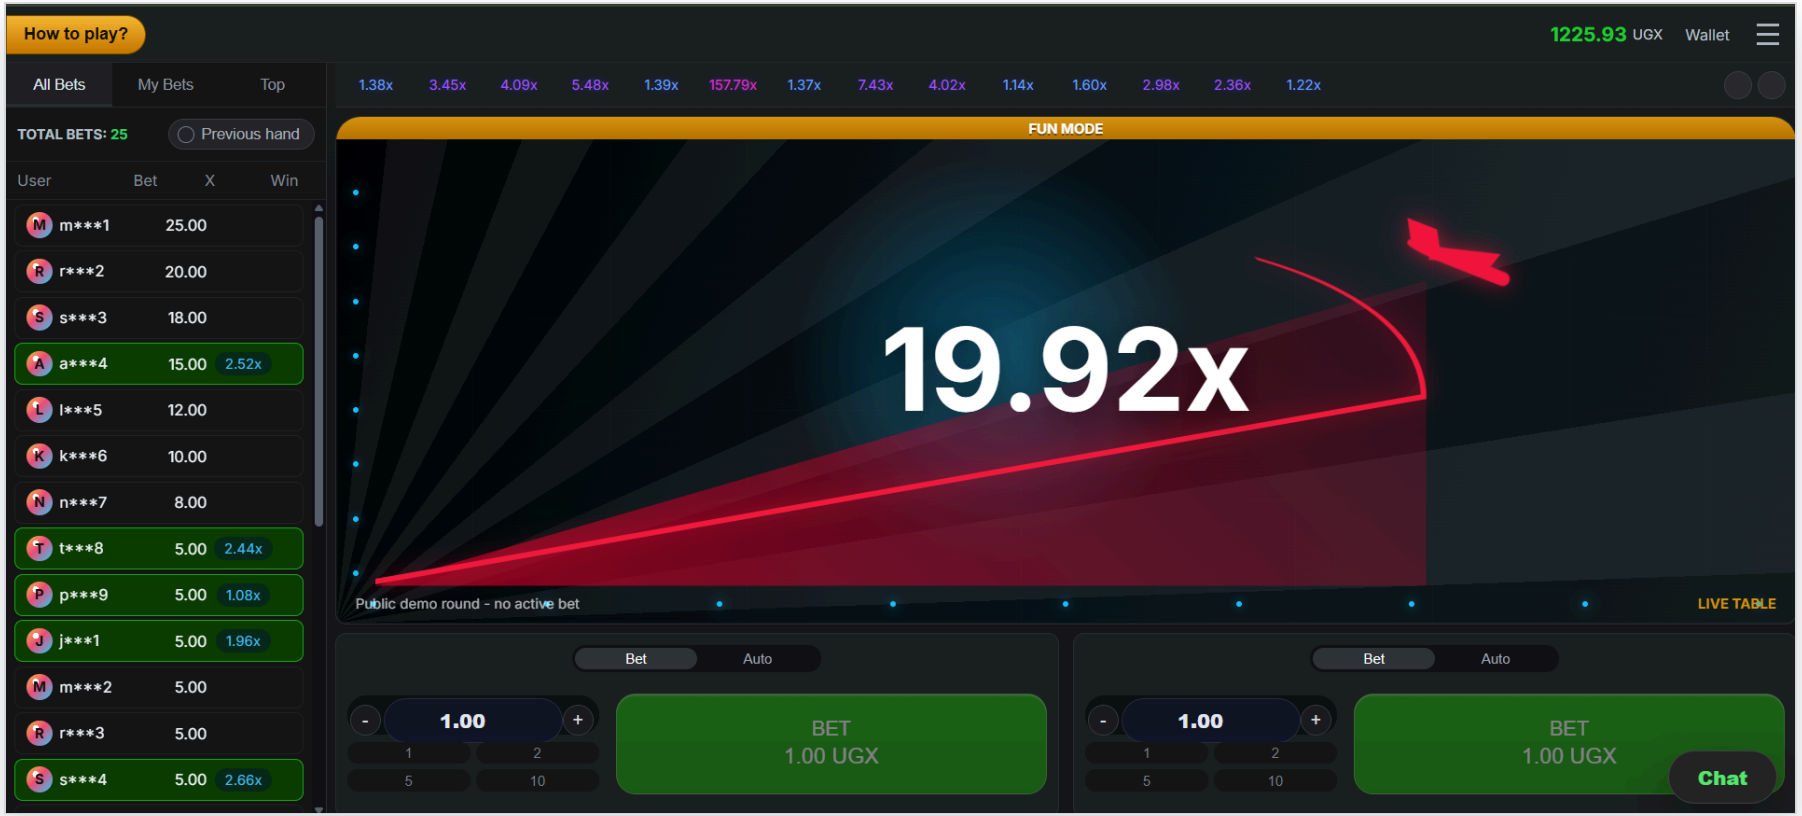

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 02

Expanded Game Flight View

Wider play view focused on the multiplier graph and betting controls, demonstrating responsive game layout and real-time flight animation.

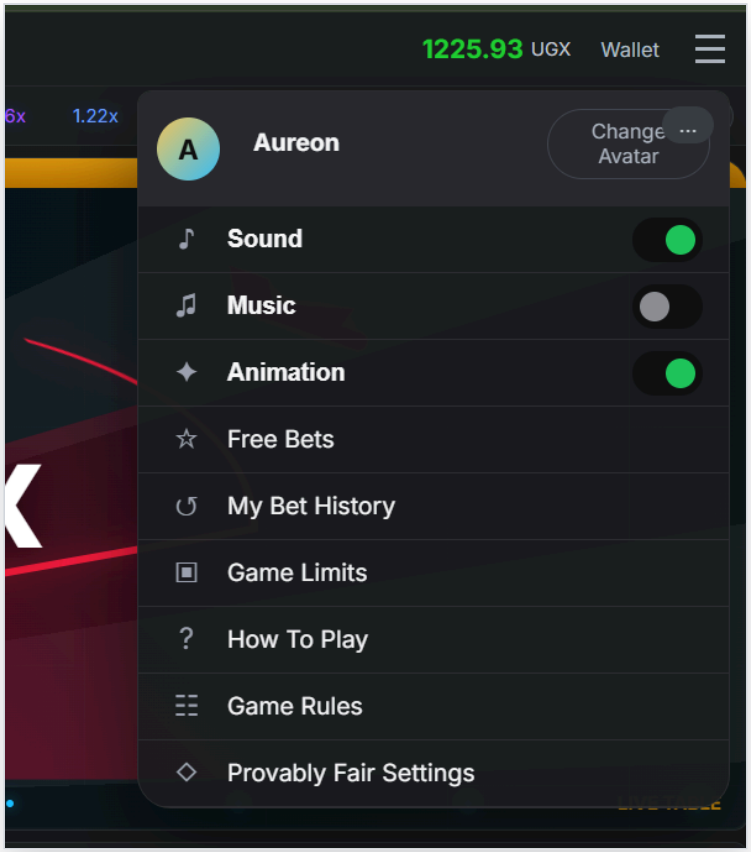

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 03

Account Menu And Settings

User account drawer with avatar control, sound/music/animation toggles, free bets, bet history, limits, rules, and provably fair settings.

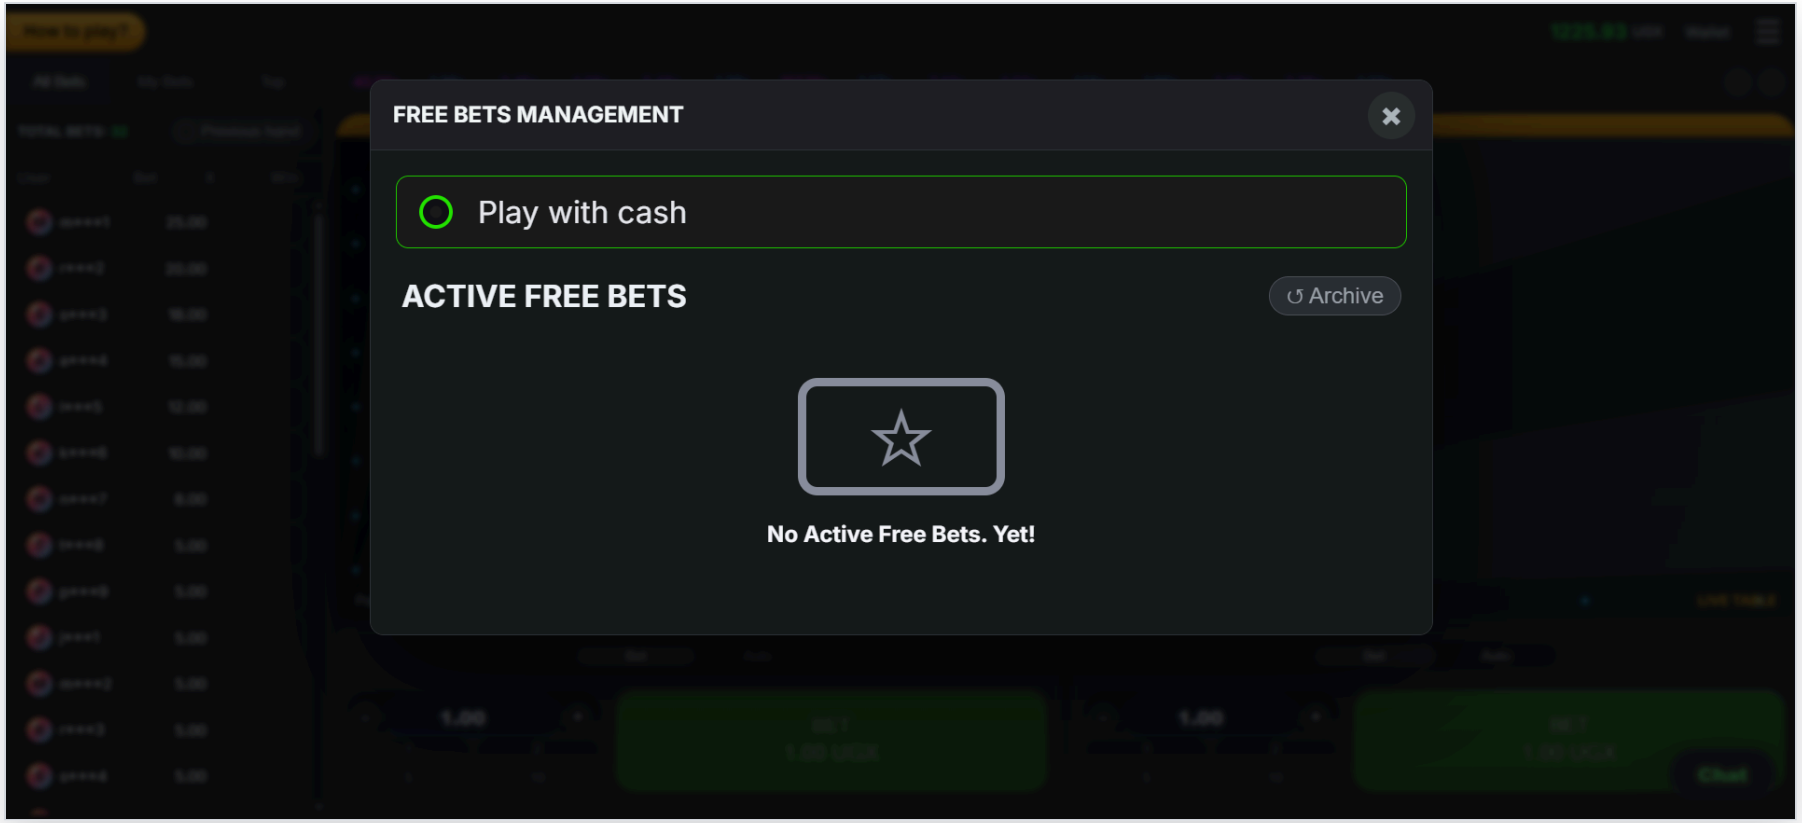

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 04

Free Bets Management

Free bets modal showing the active free bet area, archive access, and cash/free-bet play mode selection.

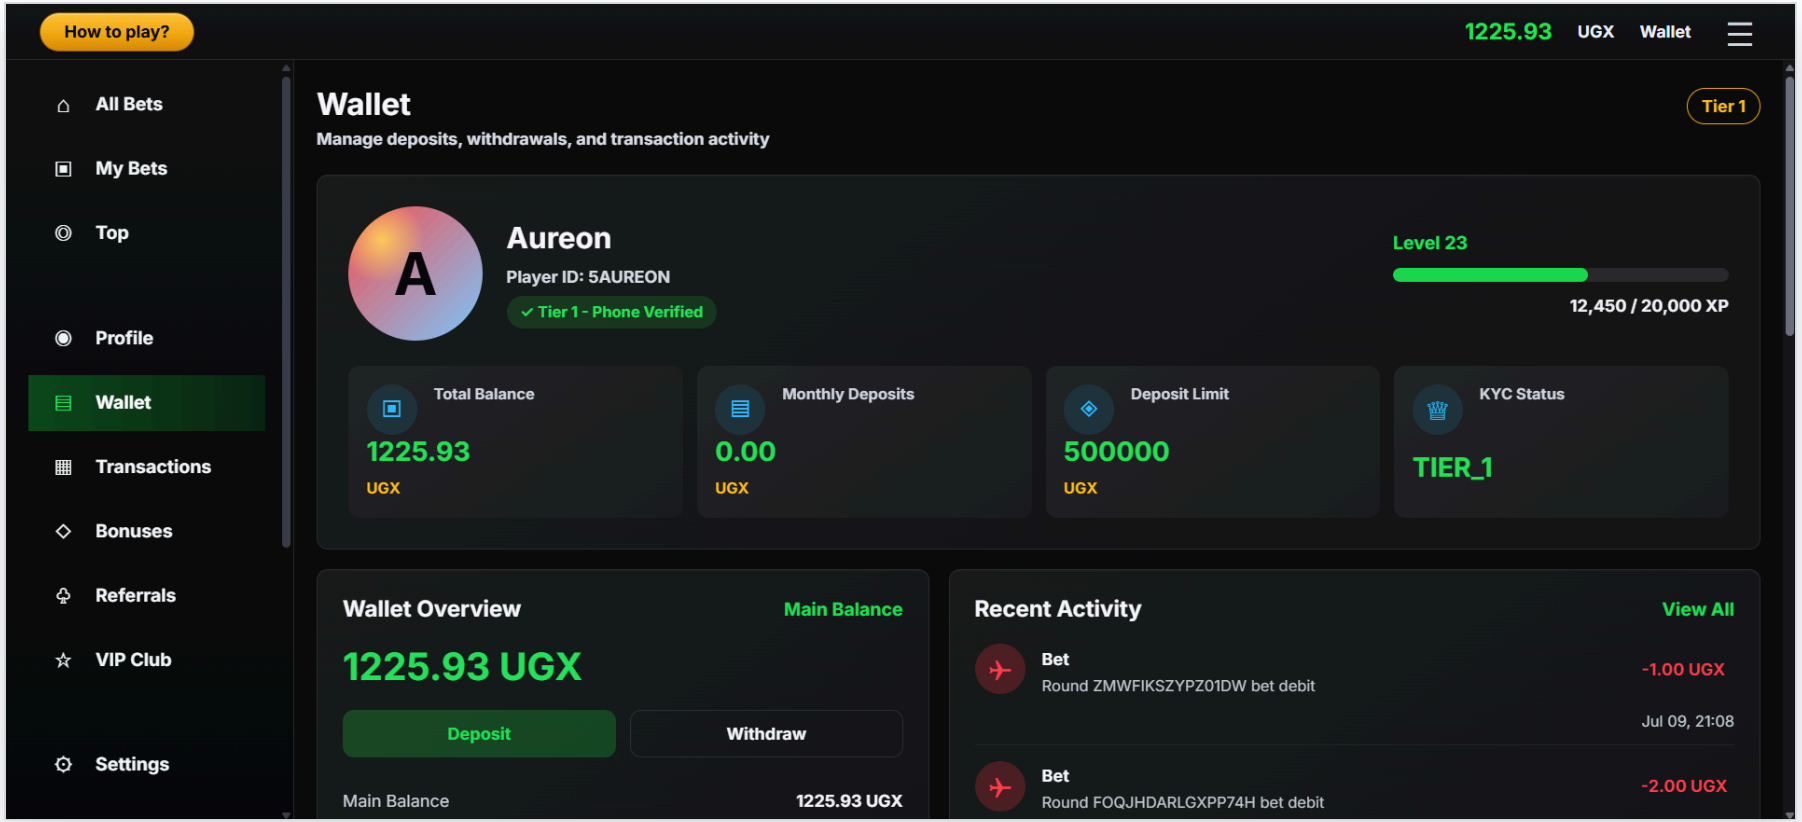

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 05

Wallet Overview

Wallet dashboard with user identity, verification tier, balance cards, XP progress, deposit limit, KYC status, and recent activity.

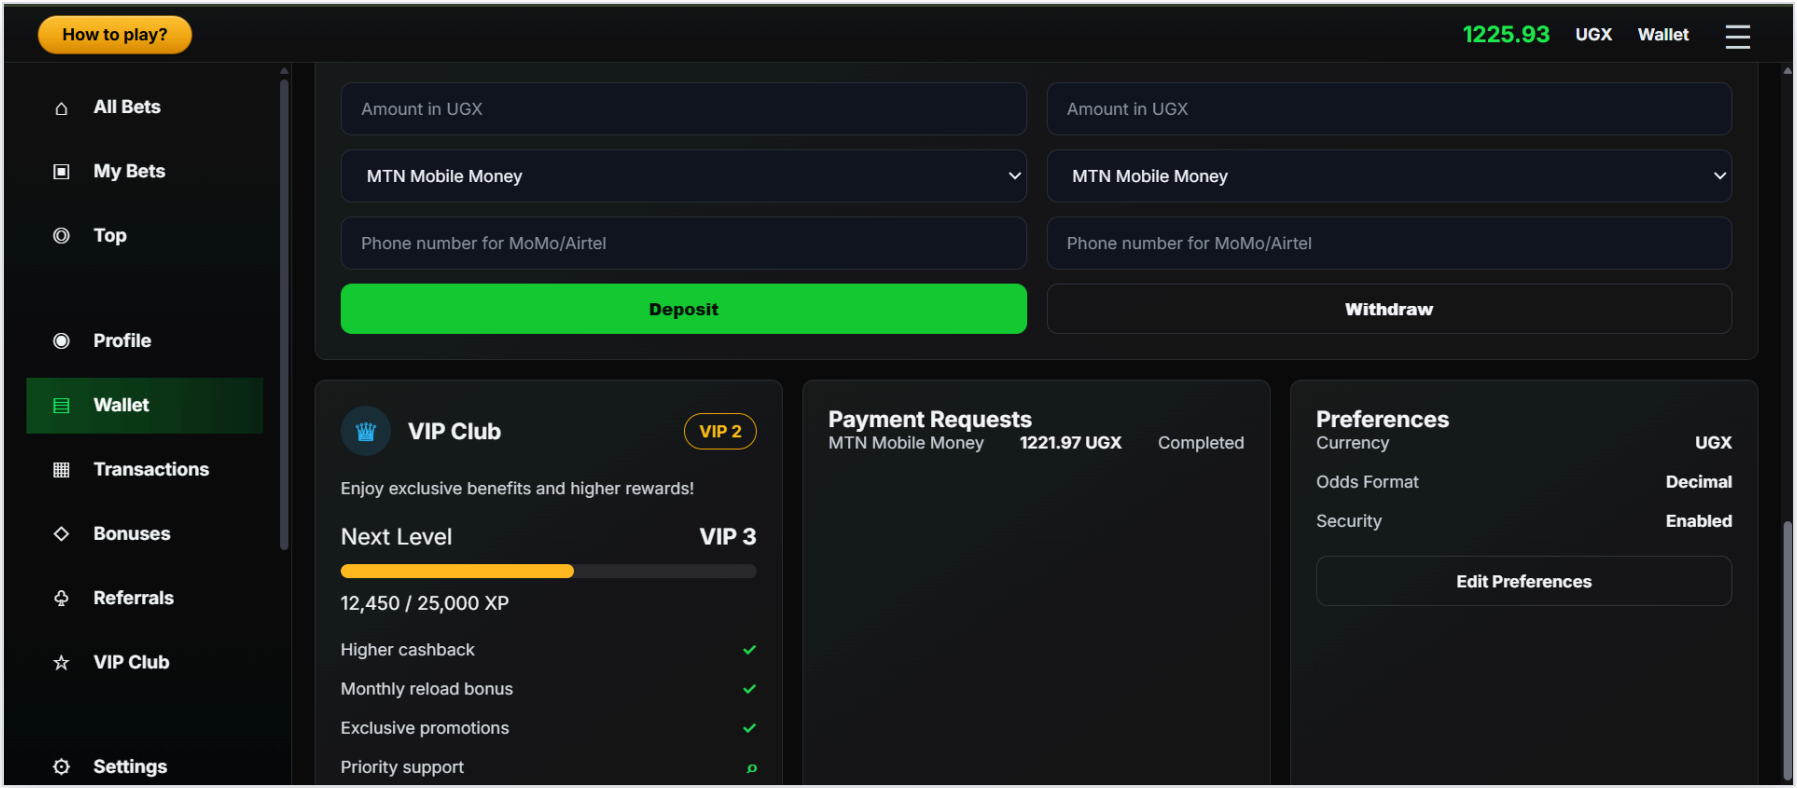

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 06

Deposit And Withdrawal Forms

Wallet action area for deposits and withdrawals using payment providers such as MTN Mobile Money, plus VIP and preference summaries.

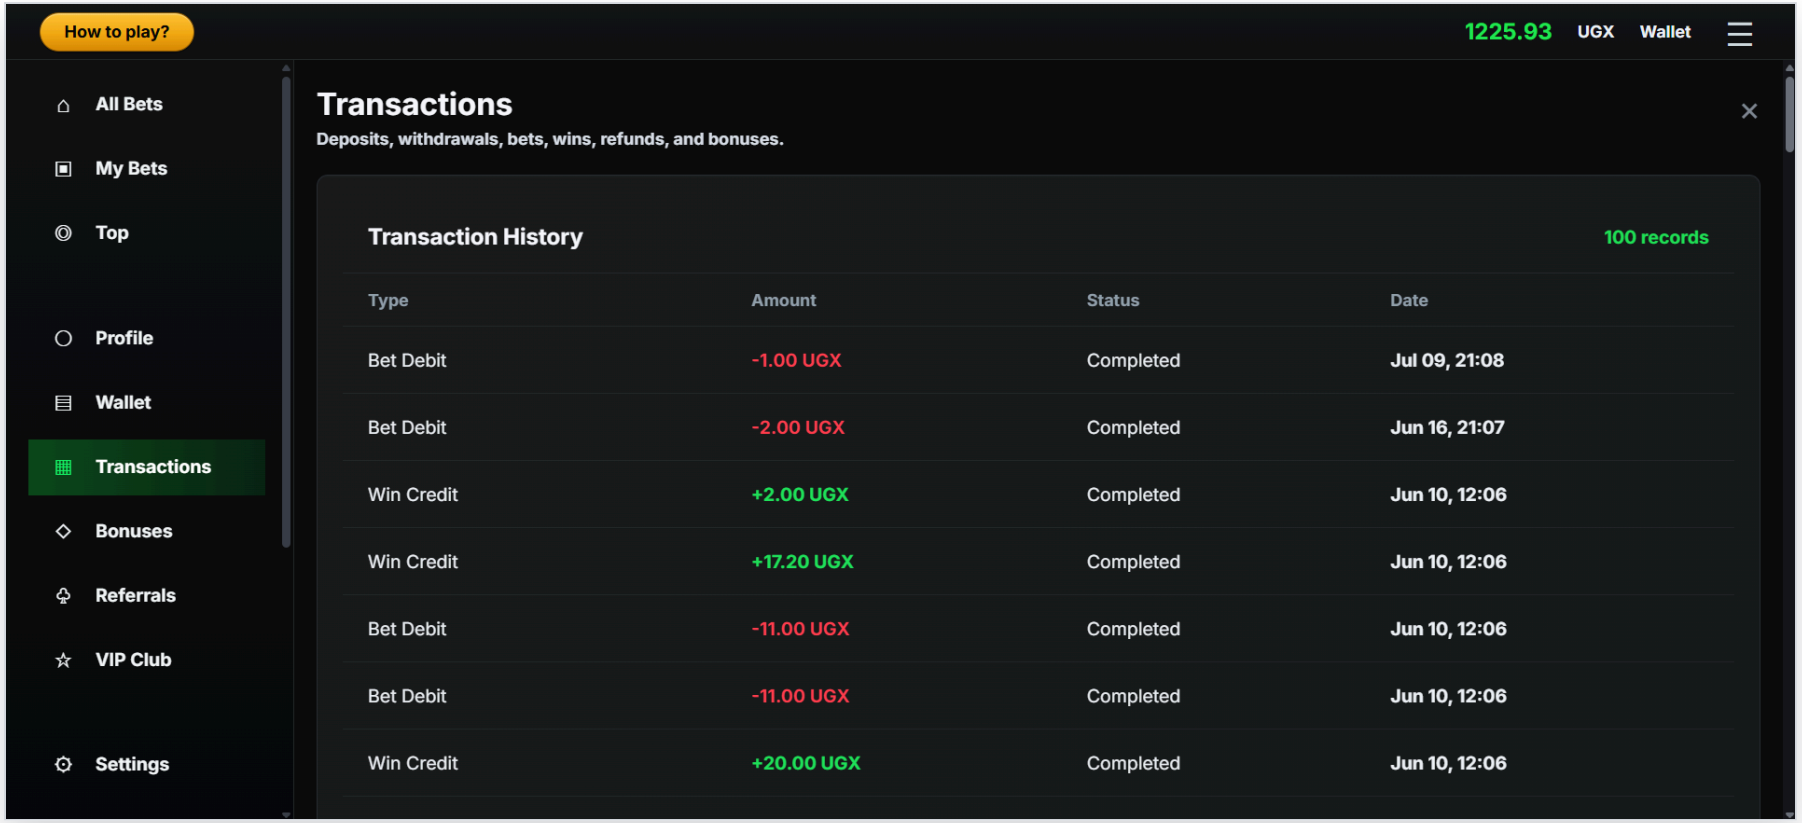

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 07

Transaction History

Transaction ledger listing deposits, withdrawals, bet debits, win credits, status, date, amount, and total record count.

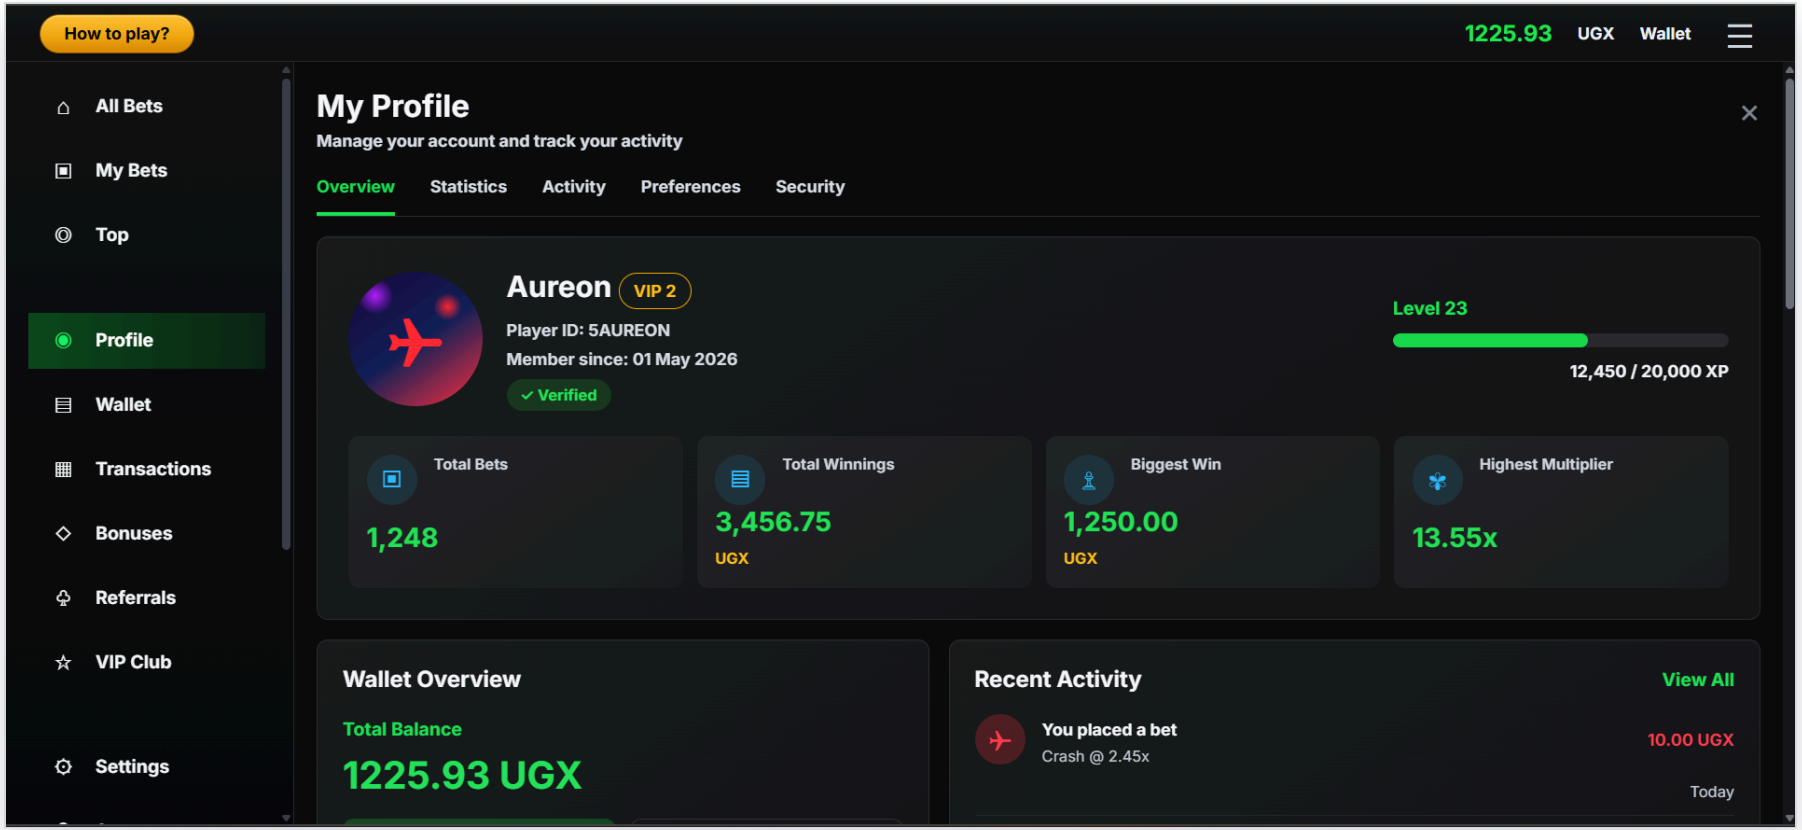

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 08

Profile Overview

Profile dashboard with player ID, VIP level, verification status, betting totals, winnings, biggest win, and highest multiplier.

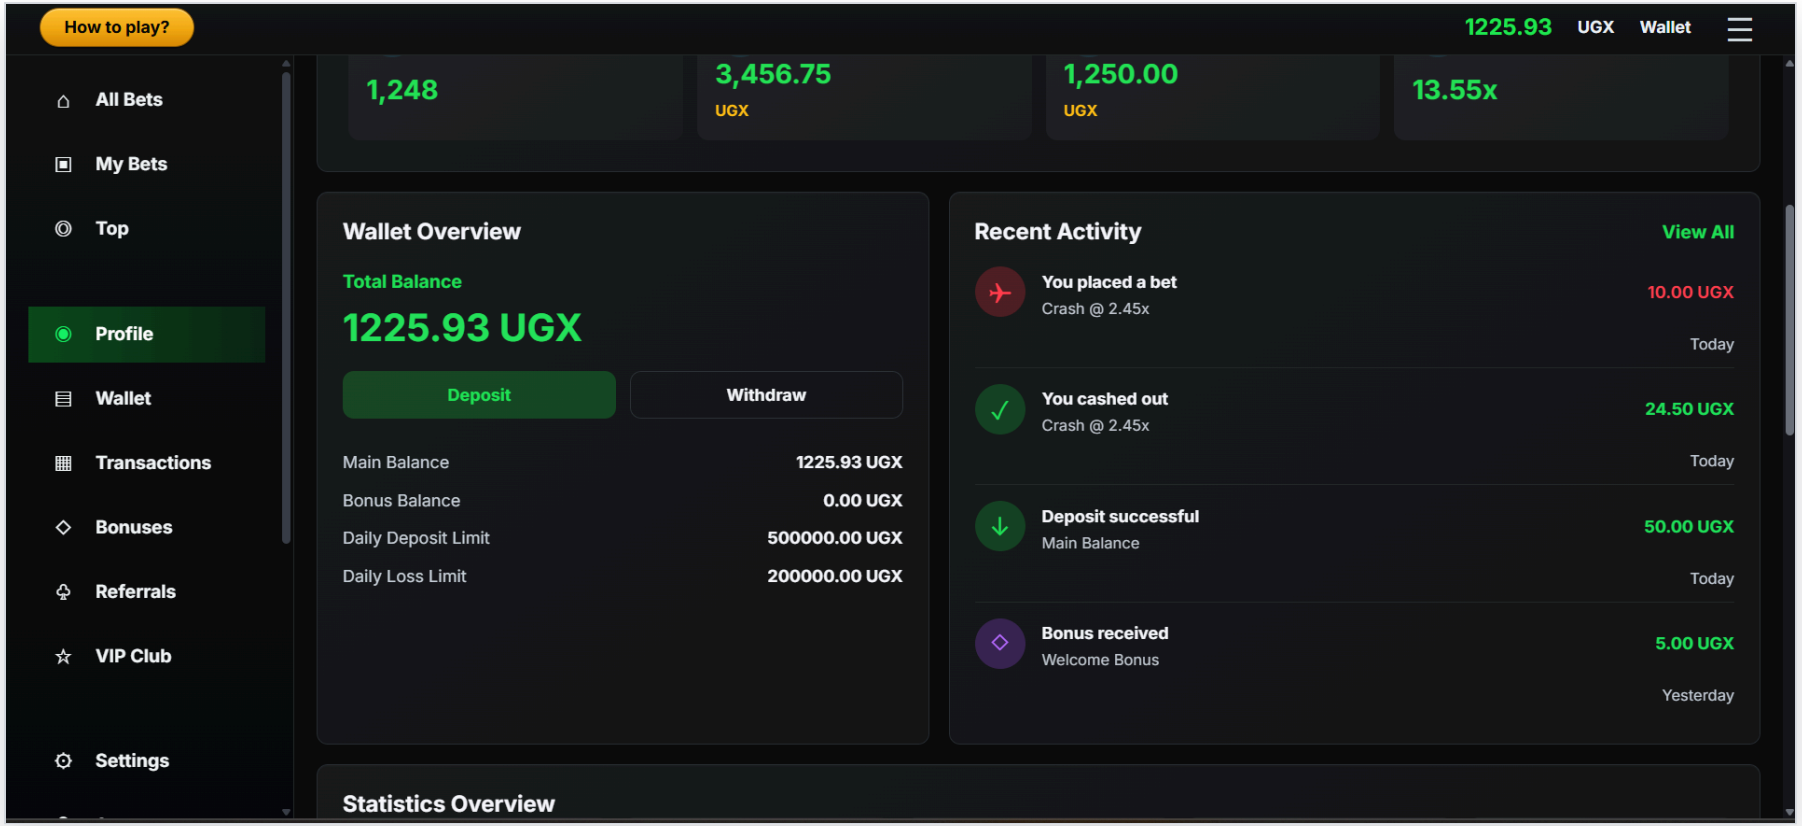

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 09

Profile Wallet And Recent Activity

Profile continuation showing balance breakdown, daily limits, deposit/withdraw actions, and recent account activity.

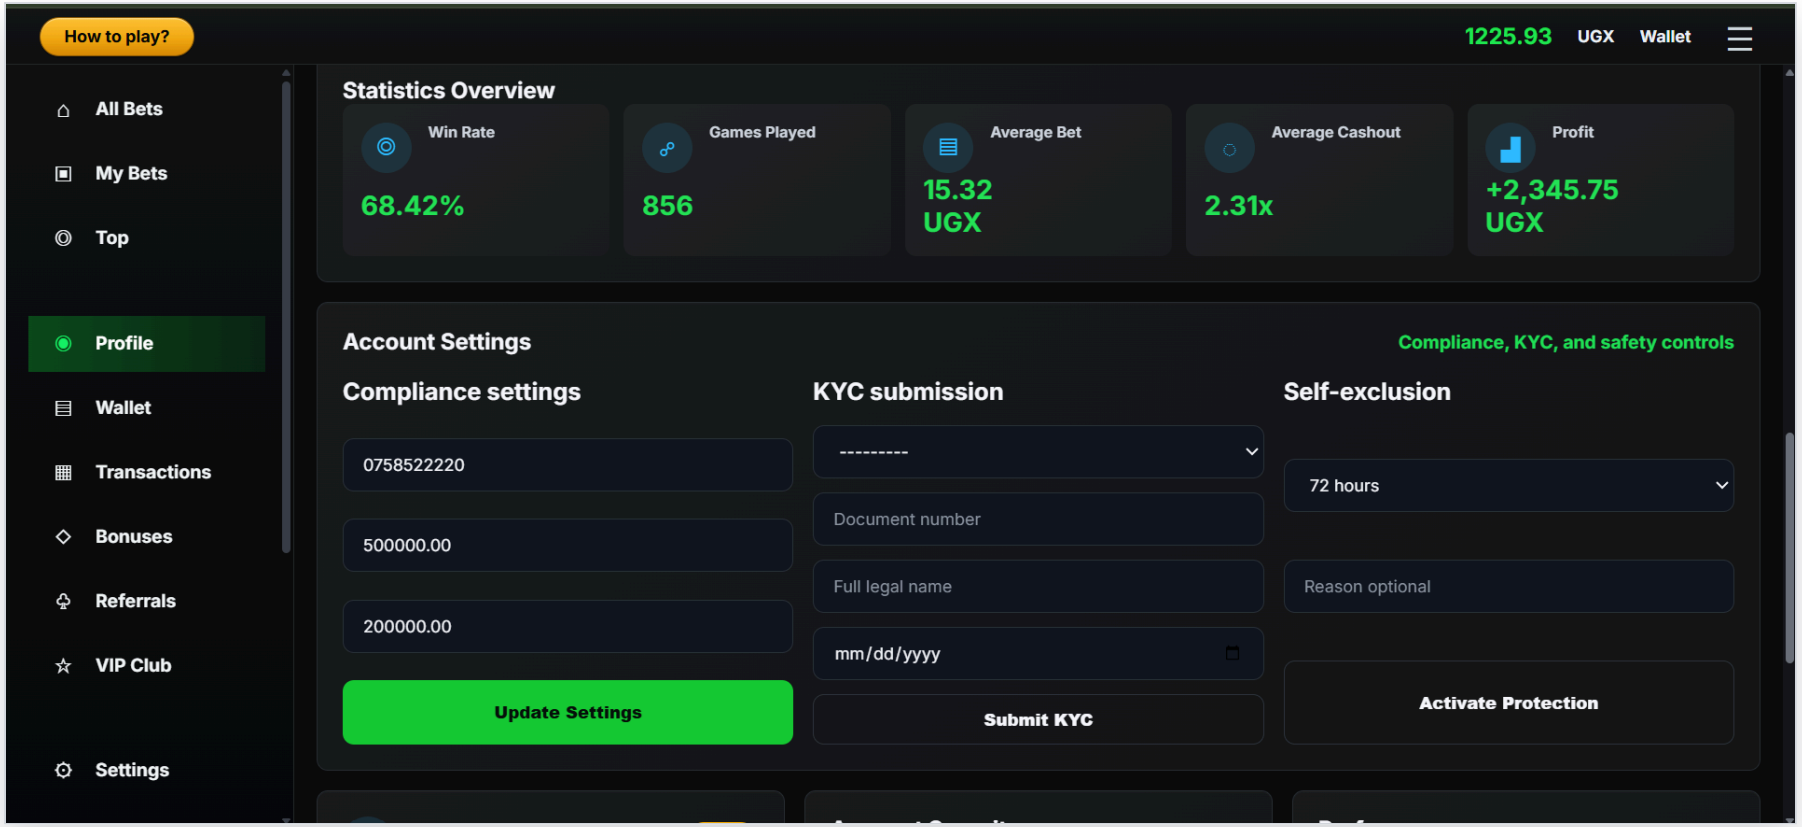

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 10

Statistics And Compliance Controls

Statistics cards plus compliance settings, KYC submission fields, and self-exclusion protection controls.

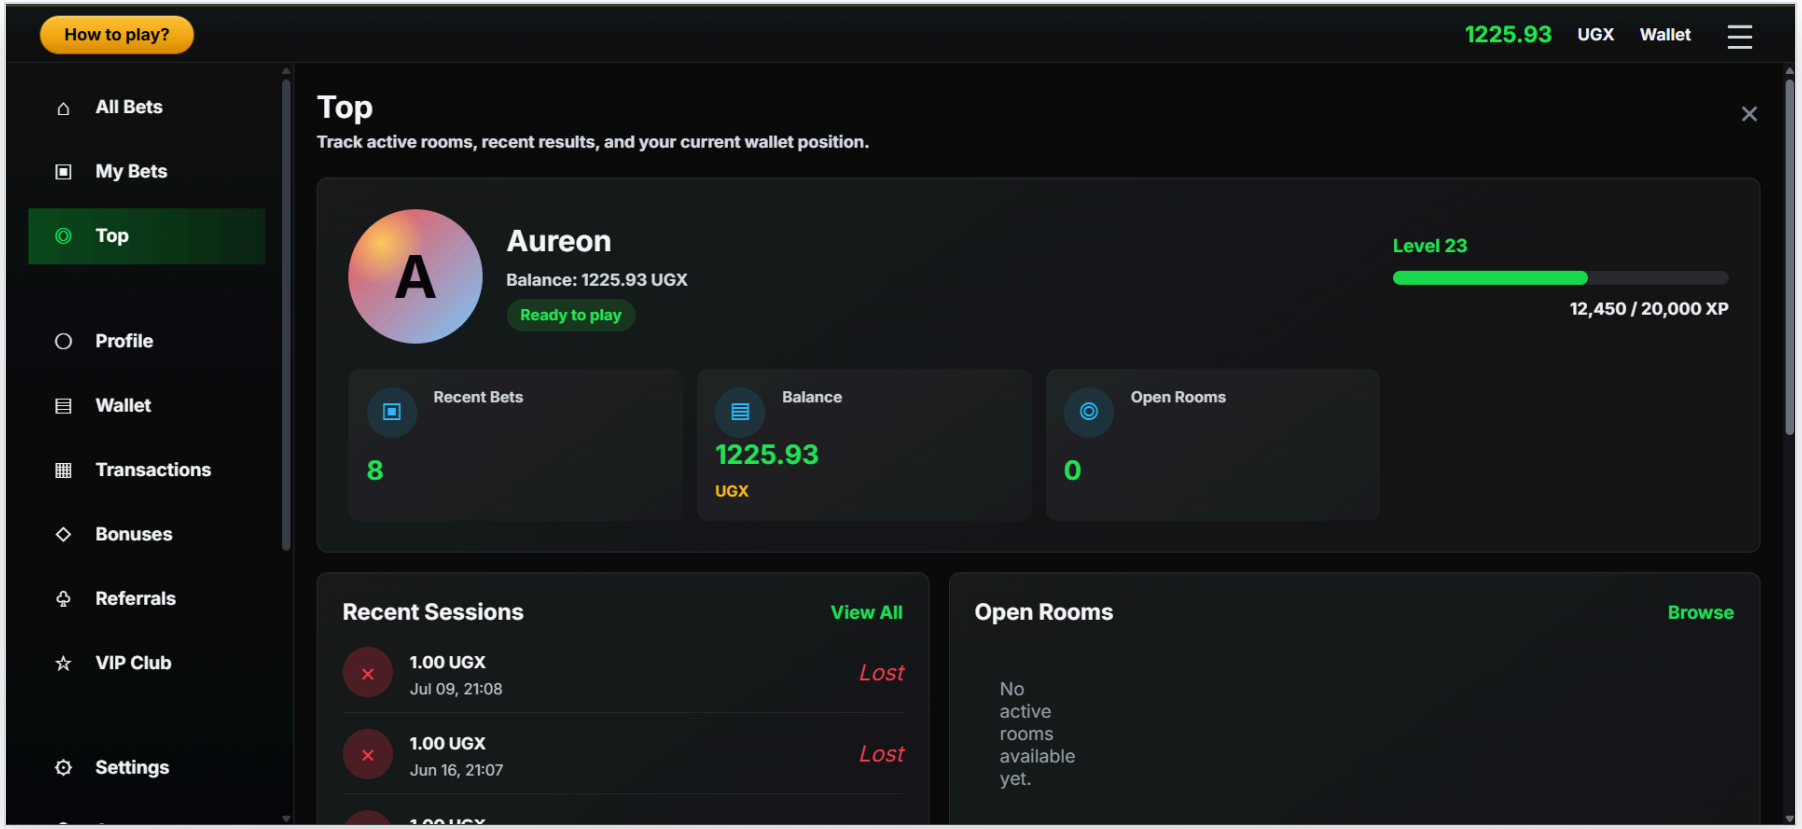

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 11

Top Dashboard

Top area summarizing balance, recent bets, open rooms, readiness state, and XP progress.

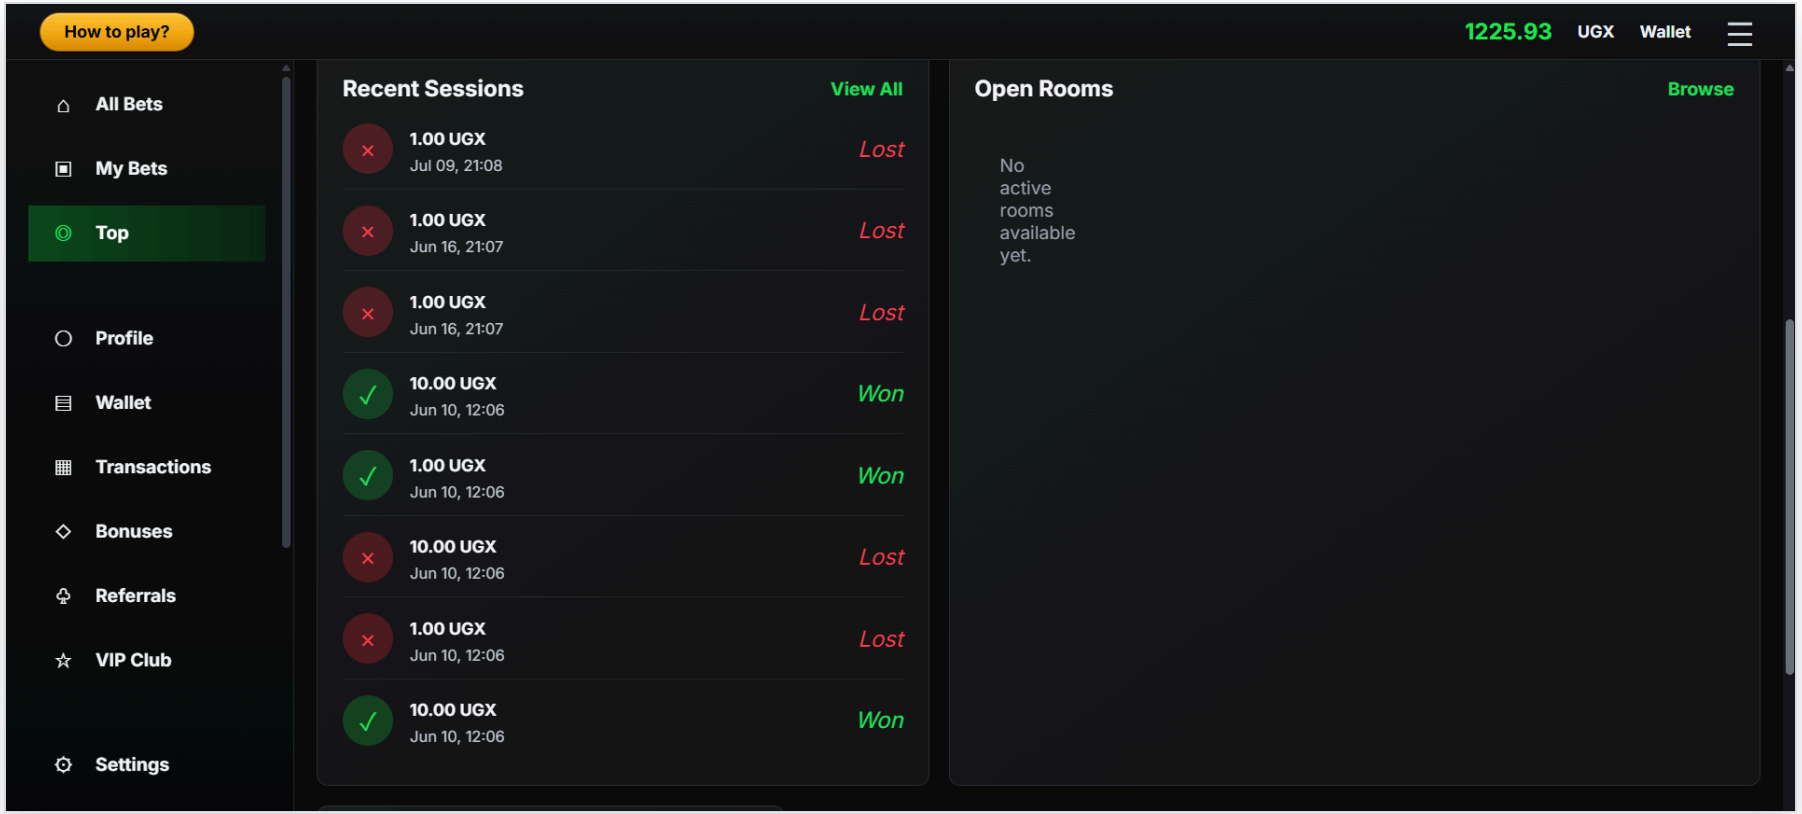

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 12

Recent Sessions And Open Rooms

Session history with won/lost outcomes and room availability panel for multiplayer game flow.

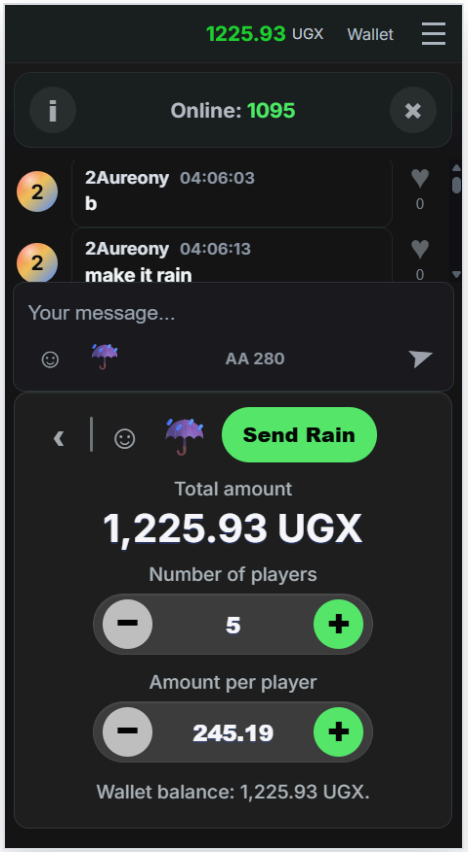

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 13

Chat Rain Reward Panel

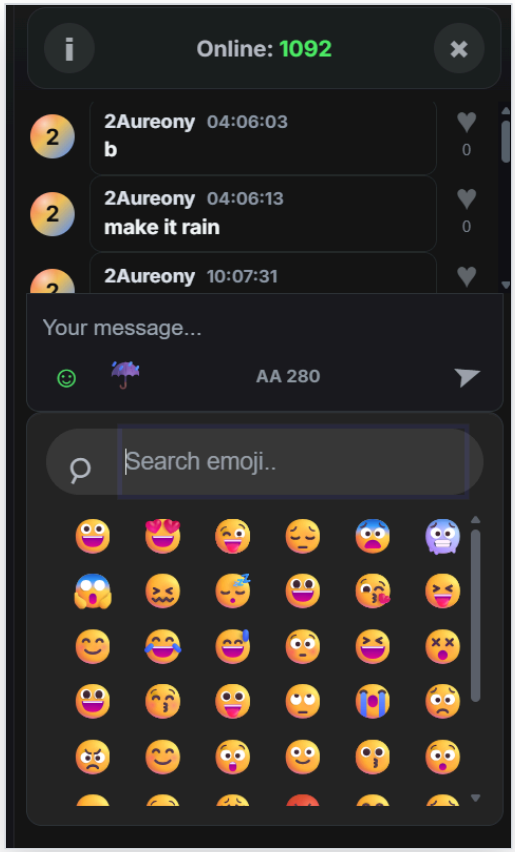

Chat rain interaction where a user can distribute wallet balance across a number of players with calculated per-player amount.

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Emoji Picker

Chat input enhancements including emoji search and picker, message input, reaction affordance, and send action.

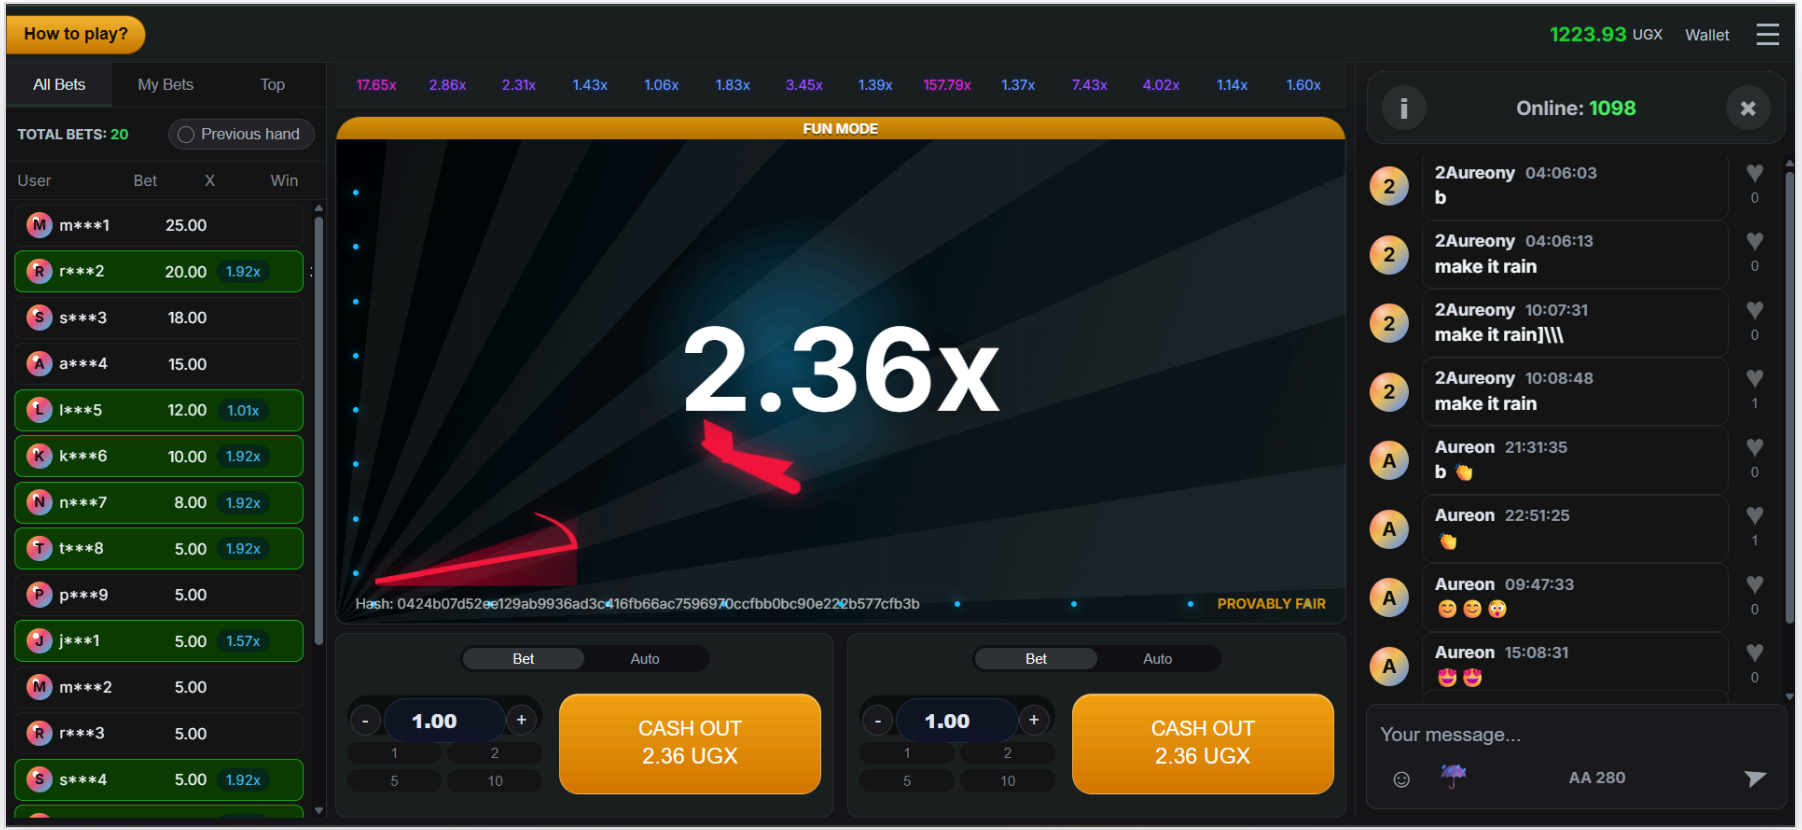

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 15

Active Betting And Cash Out

Active round with provably fair hash display and cash-out buttons for two simultaneous bets.

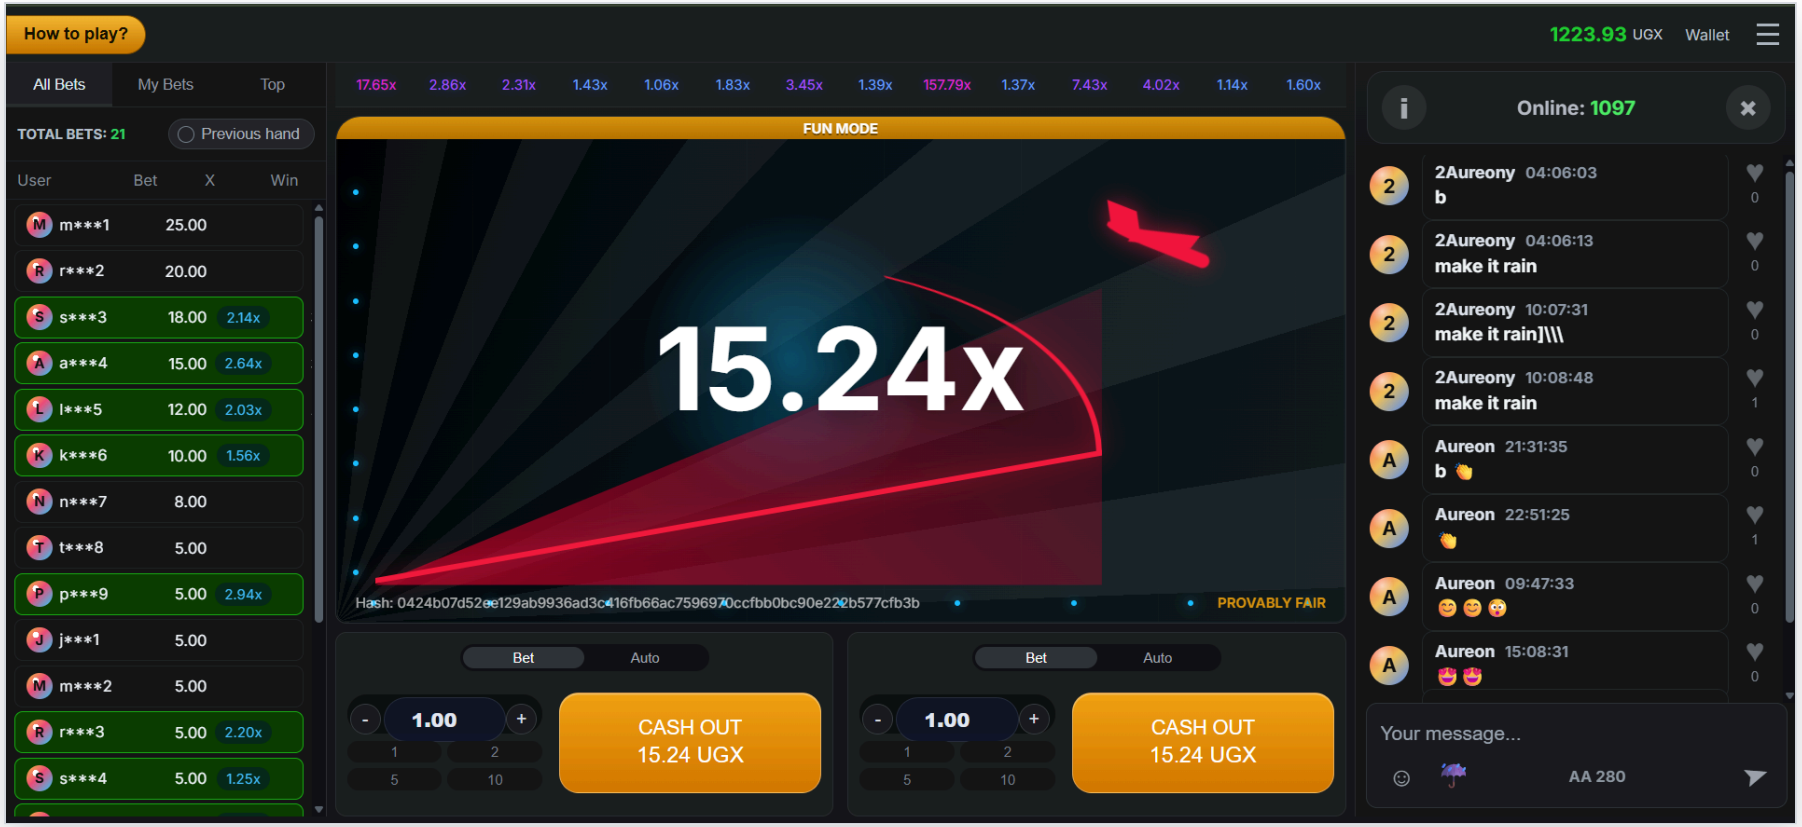

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 16

High Multiplier Cash Out State

Later round state showing a higher multiplier and updated cash-out value while the round is still flying.

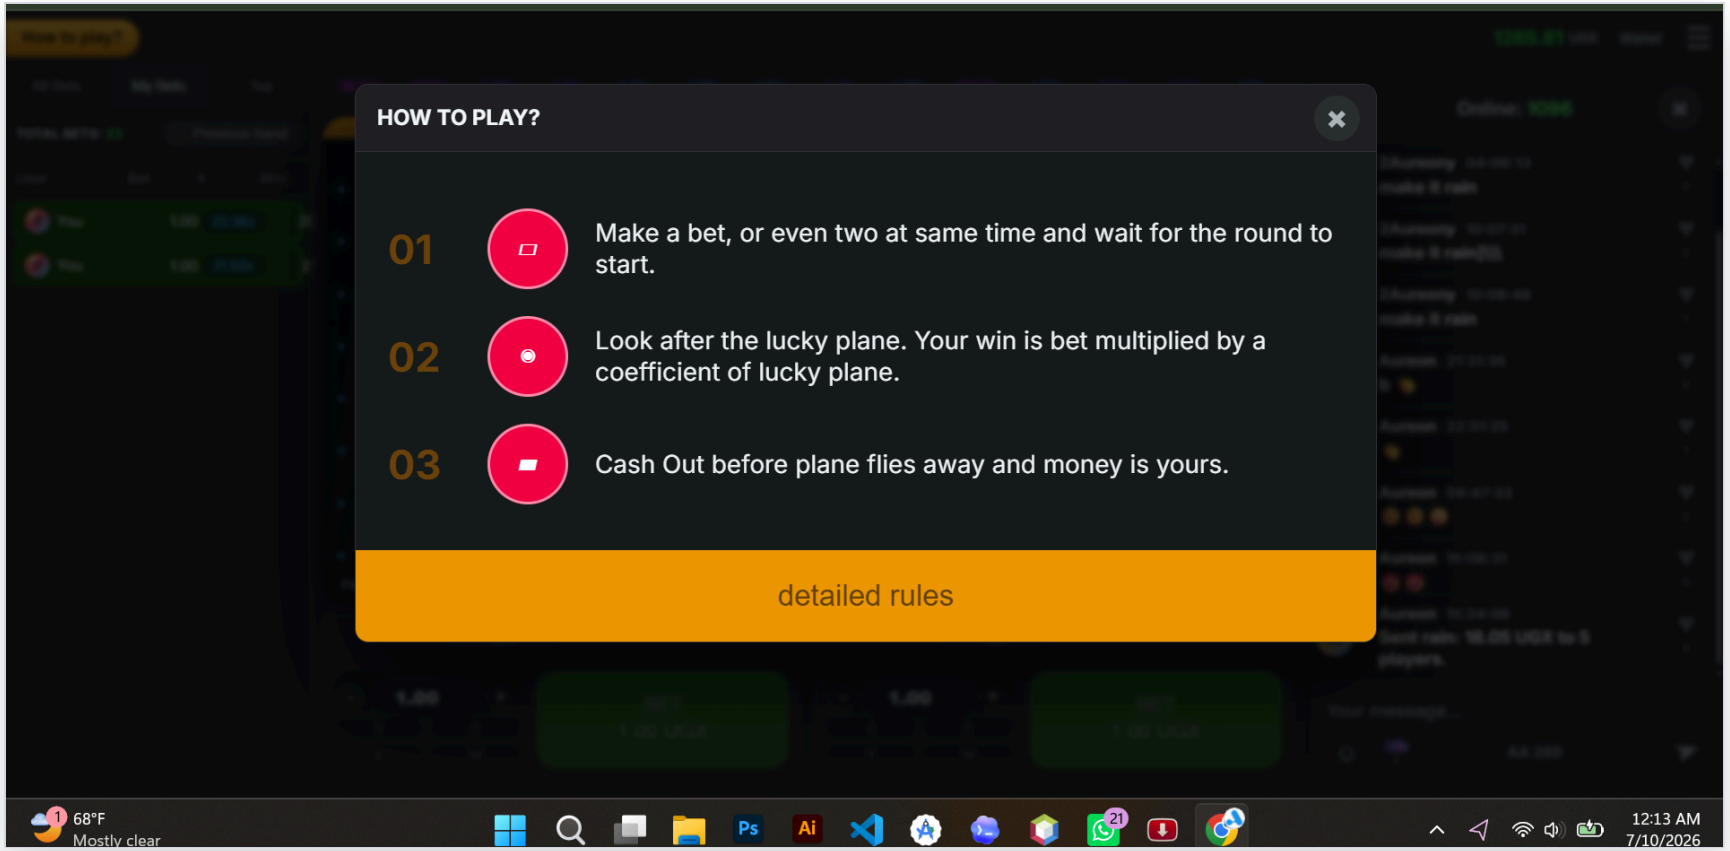

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Screenshot 17

How To Play Modal

Instruction modal explaining the basic three-step user flow: place bet, watch multiplier, cash out before crash.

Progress shown: This page confirms implemented user interface work, backend connection points, and a complete player-facing workflow for this feature area.

Conclusion

The Aviator project has reached a strong functional prototype stage. The screens show a coherent dark themed product with real application flows, while the backend provides persistence, auditability, and operational support.

- Gameplay and wallet flows are implemented and connected to transaction records.
- Responsible gaming and compliance controls are visible and backed by Django forms/models.
- Rewards, chat rain, rooms, and admin analytics expand the system beyond a simple single-player demo.
- The remaining work is mostly hardening, integration, QA, and deployment readiness.
